

OPD Patients — Year-wise Summary

Total patients in database: 17,899 · with OPD history: 16,565 *OPD visits only (`visit_type = 'OPD'`).*
All-time, no date filter. Generated 2026-08-13 (2026 is a partial year — data through 13 Aug).

New OPD patients per year

Counted by the year of each patient's **first OPD consultation**. Every patient appears exactly once, so this column sums to the all-time total.

YEAR	NEW PATIENTS	RUNNING TOTAL
2021	4	4
2022	3,299	3,303
2023	4,104	7,407
2024	2,111	9,518
2025	4,344	13,862
2026 (to 13 Aug)	2,703	16,565
No OPD visit on record	1,334	17,899

Running total = the cumulative sum: how many different patients had ever attended OPD by the end of that year.

Active OPD patients per year

Distinct patients with at least one OPD visit that year. A patient who attends across several years is counted in **each** of them, so this column does not sum to the total.

YEAR	ACTIVE PATIENTS	OPD VISITS	VISITS PER PATIENT
2021	4	4	1.0
2022	3,303	8,654	2.6
2023	5,618	21,813	3.9
2024	4,270	12,702	3.0
2025	6,298	43,577	6.9
2026 (to 13 Aug)	5,914	18,181	3.1
All-time	16,565	104,931	6.3

Notes

- **Excluded:** 3,448 LAB visits (sample drop-offs with no doctor consultation) and 9 Follow-up rows — 3,457 of the 108,388 total visit rows. Almost all of the excluded LAB visits fall in 2023 (3,447).
- **1,334 patients have no OPD visit on record.** Of these, 1,332 have no visit of any kind, and 2 have only a LAB visit.
- OPD history spans **2021-12-31** → **2026-08-13**. The four 2021 visits are all on 31 Dec 2021.
- Do not use `patients.created_at` for year-wise counts: 84% of rows (14,959) were inserted during the Feb–Mar 2026 bulk import, which reflects when data was loaded, not when patients were seen.
- 2024 is a genuine dip in both new and active patients, not a partial year.
