

Gini Billing — Step-by-Step Guide

This guide sets up billing from scratch and then uses it at the counter. Every table lists the screen's field names on the left and a sample value on the right, ready to copy.

The steps build on each other: the items created in Step 2 are the ones billed in Step 8.

Who does what

User	Can use
Admin	Everything, including Billing settings
Reception Admin	Billing counter, billing setup screens, Desk requests, CGHS register, Reports
Reception	Billing counter only

Sample patients used in this guide:

- a General patient, aged under 60
- a patient aged 60 or over
- a CGHS card holder
- a CGHS referral patient
- a CGHS pensioner

Wherever a date says **today**, choose today's date.

Step 1 — Billing settings (Admin)

Settings → Billing settings. The page has four sections, and each one has its own **Save** button.

1.1 Bills

Field	Sample value
When several discounts apply	Only the best discount
Most codes on one bill	2
Allow pay later	✓ Ticked
Bill footer	Thank you for choosing Gini Advanced Care Hospital. Please keep this bill for your records.

The hospital logo and letterhead on bills come from **Prescription settings**.

1.2 GST

Leave **Charge GST on bills** switched off. It can be switched on later, once the GSTIN, state code and legal name are filled in.

1.3 Tax codes

These are the tax rates an item can carry. Press **+ Add tax code** after each row.

Code	SAC/HSN	Rate %
EXEMPT	(empty)	0
GST18	999312	18

1.4 Number series (bill numbers)

Numbers restart every financial year (April–March) and never repeat.

Choose **Financial year 2026-27**, fill in each row below, and press **Set up** on it.

Series	Prefix	Digits	Next number	First number will be
Bills	GH26-	6	1	GH26-000001
Receipts	RC26-	6	1	RC26-000001
Credit notes	CN26-	6	1	CN26-000001

Without the Bills and Receipts series, the counter cannot finalise a bill.

Step 2 — Services (what the hospital charges for)

Settings → Services.

- **Group:** a main head, such as OPD or Laboratory.
- **Sub-group:** a section inside a group, such as Laboratory → Biochemistry.
- **Item:** one billable service with its price. Every item sits in a sub-group.

A **code** is permanent and has no spaces. A **name** can be changed later.

Doctor consultation fees are **not** set up here. They have their own page (see 2.3), and they need no group or sub-group; the app files them under **Out-patient Consultation > Consultation** by itself.

2.1 Groups — + Add group

Code	Name
LAB	Laboratory
CARD	Cardiology Tests
PROC	Procedures

2.2 Sub-groups — select a group, then + Subgroup

Group	Code	Name
Laboratory	LAB-BIO	Biochemistry
Laboratory	LAB-HAEM	Haematology
Cardiology Tests	CARD-HEART	ECG and Heart
Procedures	PROC-DRS	Dressing and Minor Procedures

2.3 Doctor fees — Settings → Consultant fees

All doctor fees are set on the **Consultant fees** page. At the top it has two views: **Fees** (the price grid) and **Not priced** (doctors with no fee yet).

First, the hospital default fee. It is charged for any doctor who has no fee of their own.

1. Open **Consultant fees → Not priced**.
2. The first rows are **Hospital default · New** and **Hospital default · Follow Up**. Press **Create item** on each. The name and code are already filled in; type only the price:

Row	Price (₹)
Hospital default · New	800
Hospital default · Follow Up	500

Now every doctor without a fee of their own shows "**Hospital default fee**" under *Billed meanwhile*.

Then, a doctor who charges a different fee. In the same list, find the doctor (use **Search doctors without a fee**), press **Create item**, and type the price:

Row	Price (₹)
Your doctor · New	1000
Your doctor · Follow Up	600

The list shows 25 doctors per page; use **Next** or the search box to find the rest.

2.4 "Not priced" on the Services page — tests

On **Services**, press **Not priced**. It lists the tests the floor can order that have no price yet. (A line at the top links to the Consultant fees page for any doctor fees still missing.)

Tests without an item. Press **Create item** on each test. The name and test link are already filled in.

Test	Code	Subgroup	Price (₹)
HbA1c	LAB-HBA1C	Biochemistry	500
Lipid Profile	LAB-LIPID	Biochemistry	600
CBC	LAB-CBC	Haematology	200
ECG	CARD-ECG12	ECG and Heart	300

2.5 An item that can be billed more than once

Select **Dressing and Minor Procedures**, then + **Add item**:

Field	Sample value
Name	Dressing — Small
Code	PROC-DRS-S
Kind	Procedure
Price (₹)	250
Quantity can be more than 1	✓ Ticked
Max quantity	5

Good to know:

- To change a price, edit the item. The screen asks for a reason, for example *Reagent cost increased*, and records it under **Price history**.
- An item that has been used on a bill cannot be deleted. It can only be **deactivated**.

Step 3 — Categories (who pays)

Settings → Categories.

- **Category:** the type of patient, such as CGHS, ECHS or Senior Citizen. A patient with no category is billed as **General**, so General is never created here.
- **Sub-category:** a type inside a category, such as CGHS → CGHS Paid.
- **Who belongs:** rules that set a patient's category automatically.
- **What the patient pays:** rules that split a price into the patient's share and the part claimed from the payer, such as CGHS.

CGHS, ECHS, Himachal Government, Senior Citizen and Special Discount already exist.

3.1 Set up CGHS — select CGHS

Field	Sample value
Payer name	CGHS Chandigarh
Print the category on the bill	✓ Ticked

Press **Save**.

3.2 CGHS sub-categories — + Sub-category

Code	Label	Tick these, then Save
cghs_paid	CGHS Paid	Card number required, Print the category on the bill
cghs_referral	CGHS Referral	Needs a referral, Print the category on the bill
cghs_pensioner	CGHS Pensioner	Card number required, Print the category on the bill

Leave **Payer name** empty on each sub-category; it uses CGHS's. A CGHS patient must always be billed under one of these three.

3.3 Who belongs — open Senior Citizen, then + Add rule

Field	Sample value
Rule name	Age 60 and above
From age	60
How it applies	Automatic

Now every patient aged 60 or over opens at the counter as **Senior Citizen**. The desk can still change it.

3.4 What the patient pays — + Payment rule

Add on	Rule name	Applies to	Patient pays	The rest
CGHS	CGHS — patient pays 20%	The whole category	A percent: 20	Claimed from CGHS Chandigarh
CGHS Paid	CGHS Paid — consultation ₹200	A group: Out-patient Consultation	A fixed amount: 200	Claimed from CGHS Chandigarh
CGHS Referral	Referral — nothing to pay	The whole category	Nothing	Claimed from CGHS Chandigarh
CGHS Pensioner	Pensioner — nothing to pay	The whole category	Nothing	Claimed from CGHS Chandigarh

Leave the dates and priority empty.

How the rules combine:

- The most specific rule wins: an item rule beats a sub-group rule, which beats a group rule, which beats a whole-category rule.
- A sub-category's own rule beats its parent's rule.
- Example: a CGHS Paid patient pays ₹200 for a consultation and 20% of everything else.

Tip: press **Test this rule** inside the form to preview the patient's share before saving. Nothing is saved by the preview.

Step 4 — Category rates (special prices)

Settings → **Category rates**. Choose **Category: CGHS**, then **Edit** a row and **Save**.

Item	Rate (₹)	Bill name	Bill code	From
HbA1c	450	Glycosylated Haemoglobin (HbA1c)	CG101	today
ECG	250	ECG 12 Lead	CG201	today

CGHS sub-categories use these rates automatically; the screen shows them as **From CGHS**. **History** shows past rates.

Step 5 — Consultant fees

Settings → **Consultant fees** → **Fees**. One grid holds every doctor's New and Follow-up fee for every category. Click a cell to change it. Use the **search box** (doctor name or code) and the **Doctor** and **Category** filters to find a doctor; the grid shows 25 doctors per page.

Click the consultant's **New** row, **CGHS Paid** column:

Field	Sample value
Fee (₹)	900
Patient pays	An amount (₹): 200
The rest goes to	Claim (CGHS Chandigarh)
Bill name	OPD Consultation — CGHS
Bill code	CG001
Valid from	today

Copy column to... copies one category's fees to another in one step, for example **CGHS Paid** → **ECHS**.

Step 6 — Discounts

Settings → **Discounts** → **+ New discount**.

- A **code** discount is typed by the desk.

- An **automatic** discount applies by itself.
- The desk can never type a discount amount by hand.

Field	Senior discount	Health camp coupon	Doctor's coupon	Camp price
Name	Senior citizen 10% off	Health camp ₹50 off	Doctor coupon 5%	Lipid Profile camp price
How it applies	Code	Code	Code	Automatic
Code	SENIOR10	CAMP50	DOC5	—
Kind	Percent off: 10	Flat ₹ off: 50	Percent off: 5	Fixed price: 450
Largest discount ₹	500	—	—	—
Applies to	Each line	The whole bill	Each line	Each line
Covers	—	—	Doctors: your consultant	Items: LAB-LIPID
Who gets it	From age: 60	—	—	—
Valid to	2026-12-31	2026-10-31	—	2026-10-31
Limits	Uses per day: 50	Uses in all: 100, Uses per patient: 1	Uses per doctor per day: 5	—
Other	—	Stacks with other discounts ✓	Who may enter: Reception admin, Admin	—

Leave any field marked — empty. Set **Valid from** to today on every discount.

Test this rule (below the list) prices a sample bill without saving anything. For example:

- **Age:** 65
- **Items:** HbA1c and Lipid Profile
- **Codes:** SENIOR10, DOC5
- **Test as role:** Reception

Press **Test**. SENIOR10 applies. DOC5 is refused, because reception may not enter it.

Step 7 — Bulk import (many rows at once)

Settings → Bulk import.

1. Press **Download template**. It downloads an Excel file with one sheet per kind of data and a **Read me** sheet.
2. On the **Items** sheet, add rows. For example:

item_code	name	subgroup_code	base_price	kind	test_name
LAB-TSH	TSH	LAB-BIO	280	test	TSH
LAB-CBC	CBC	LAB-HAEM	240	test	CBC

3. Upload the file. Every row is checked first and sorted into four lists:

- **Ready:** new rows.
- **Needs override:** changes to rows that already exist. A change is saved only if you press **Override**.
- **Failed:** rows with a mistake. The reason is shown, for example *base_price must be a plain number (no ₹ sign, no commas)*.
- **Unchanged:** rows that already match.

4. Press **Commit**. Only Ready rows and the rows you chose to override are saved.

Amounts are plain numbers, dates are written as 2026-10-01, and an empty cell uses its default value.

Step 8 — Billing counter (daily use)

8.1 Start of day — open the cash drawer

Open **Billing Counter** → **Shift**. Enter **Opening cash: 2000** and press **Open shift**.

Cash can only be taken while a shift is open. Card and UPI payments work without a shift.

8.2 Check-in creates the bill

When reception checks a patient in, a **draft bill** opens by itself with the consultation fee on it. Tests the doctor orders are added to the bill automatically.

Press **Bill** on the patient's row at reception to open their bill.

Case A — General patient, cash payment

1. **Add items:** HbA1c, then Dressing — Small. Change the dressing's **Qty** to 2.
2. **Discount code:** CAMP50, then **Apply code**.
3. **Payment:** Mode **Cash**, press **Rest**, then **Take payment**.
4. Press **Finalise & print** to get the bill (GH26-000001), then **Print receipt** for the receipt.

Case B — Senior patient, card + UPI

1. The bill opens as **Senior Citizen** automatically.
2. Add Lipid Profile (the ₹450 camp price applies by itself) and HbA1c.
3. **Discount code:** SENIOR10.
4. **Payment 1:** Card, **500**, Reference **4321**.
5. Press + **Split payment**. **Payment 2:** UPI, **Rest**, Reference **UPI302611223344**.
6. Press **Take payment**, then **Finalise & print**.

A wrong code is refused with the reason. For example, SENIOR10 on a patient under 60 is refused because of age.

Case C — CGHS Paid

1. **Category:** CGHS → CGHS Paid.
2. **Card number:** CGHS12345678. Press **Save numbers**, then **Confirm category**.
3. Add HbA1c and ECG. The lines show the CGHS names and codes.
4. **Totals** shows the **Claimed** part, which CGHS pays. Take only the patient's share.
5. Press **Finalise & print**. The bill shows **CGHS pending**.

Case D — CGHS Referral

1. **Category:** CGHS → CGHS Referral.
2. **Referral number:** REF/CHD/2026/0457. Press **Save numbers**, then **Confirm category**.
3. Add Lipid Profile. There is nothing to pay.
4. Press **Finalise & print**. The bill shows **CGHS pending**.

Case E — CGHS Pensioner

1. **Category:** CGHS → CGHS Pensioner.
2. **Card number:** CGHS87654321. Press **Save numbers**, then **Confirm category**.
3. Add CBC. There is nothing to pay.
4. Press **Finalise & print**.

Case F — Pay later

1. Add CBC.
2. Tick **Pay later**, then **Finalise & print**.
3. Later: open the **Dues** tab, press **Take payment**, and collect the amount.

Case G — Billing the same item twice (needs approval)

1. Add an item that is already on this visit's bill. It shows **Ask admin to bill again**.
2. Enter a reason, for example *Repeat sample — first sample haemolysed*, and press **Send request**.
3. The admin opens **Settings → Desk requests**, presses **Approve**, then **Approve request**.
4. Back at the counter, press **Add to bill** under **My requests**.

Case H — Item not in the list

1. Search **Nebulisation**. Nothing is found, so press **Request new item**.
2. Fill in **Item name:** Nebulisation, **Group:** Procedures, **Why:** *Doctor advised nebulisation today*.
3. The admin opens **Desk requests** and presses **Create item**.
 - **Code:** PROC-NEB
 - **Subgroup:** Dressing and Minor Procedures
 - **Price:** 300

4. The admin presses **Create item and approve**. The item can now be billed.

Case I — Cancel an unpaid bill

On a final bill with nothing paid, press **Cancel unpaid bill** and enter a reason, for example *Patient left before paying*. Then press **Start a new bill for this visit** if needed.

Case J — Second bill on the same visit

A test ordered after a bill is final opens a new draft bill. Press **Open the new draft bill**. Earlier bills stay under **Earlier bills on this visit**, where **Print** reprints them.

Case K — Lab waits for payment

An ordered test waits at the lab until it is paid. Once the counter takes the payment, the lab can start the test.

CGHS Referral and Pensioner tests are released when the bill is finalised, because CGHS pays for them.

8.3 End of day — close the cash drawer

Open the **Shift** tab. Enter the **Counted cash** and press **Close shift**.

The screen shows the expected cash, the counted cash and any difference.

Step 9 — CGHS register (claims from CGHS)

Menu → CGHS register (Admin or Reception Admin).

Every CGHS bill stays **Pending** until CGHS pays the hospital.

1. On the **Pending** tab, tick the bills that CGHS paid for, then press **Clear selected**.
2. Fill in the payment:

Field	Sample value
Date received	today
Reference (UTR)	UTR2026092500123
Amount received (₹)	<i>(already filled with the total claim)</i>
Note	CGHS September batch

3. The screen confirms *The amount matches the selected claims*. Press **Save**.
4. At the counter, those bills now show **Cleared on** and the date.

If the amount does not match, the register shows the difference and **Save** stays off.

An Admin can **Undo** a wrong entry from the **Cleared** tab. The **Print pending list** and **Export (.xlsx)** buttons give the lists for CGHS follow-up.

Step 10 — Billing reports

Menu → Billing Reports. Choose the dates, then open a tab. **Download Excel** saves every tab.

Report	Shows
Revenue by service / consultant / category	Earnings split each way
Collections	Cash, card and UPI, by user, shift and day
Dues	Bills still unpaid
Discounts	Every discount and coupon given
CGHS receivables	What CGHS still owes, and for how long
Coupon usage	How often each code was used
Cancellations	Cancelled bills and the reasons
Desk requests	Bill-again and new-item requests

Coming next

- **Refunds and credit notes** at the counter. Until then, a paid bill cannot be cancelled.
- **GST on bills.** It is ready, and is switched on in Billing settings when the hospital needs it.
